

Through week **201640**, the week ending **10/8/2016**

Edited by: Jill K Baber, MPH

All data are preliminary and based on reports received at the time of publication.

Published 10/13/2016

Influenza Cases by Type	
A, unspecified	10
2009 A H1N1	0
A H3	1
B, unspecified	2
B Yamagata	0
B Victoria	1
Total	14

Weekly Narrative Welcome to the 2016-17 influenza season! Influenza cases for this season have already started to trickle in. This time last season, six cases from five counties had been reported. This season, we have 14 cases from eight counties reported so far. Early case reports around this time of year are “normal” for the influenza season in North Dakota, so it is too early to tell what this season will be like. Geographic activity this

week is being reported as **sporadic**.

Number of Reported Laboratory-Identified Influenza Cases Reported by Week

All laboratory-identified cases of influenza (including identification via rapid test) are reportable in North Dakota. Statistics do not include data from people who did not seek medical care for their illness, or who sought medical care but were diagnosed based on symptoms, not with a laboratory test.

Demographic Data

Case Count for Lab-Confirmed Cases by Gender

Lab-Confirmed Cases by County

Reported Influenza Deaths and Hospitalizations*

*Data obtained from ad-hoc reports and state Vital Statistics. Hospitalizations and deaths are not required to be reported in North Dakota, although pediatric flu deaths are nationally reportable.

Outbreaks and Multi-season Comparison

Outbreaks There have been 0 reported outbreaks of influenza-like illness in long term and basic care setting so far this season.

Outbreaks in schools, assisted living facilities, workplaces, and in the general community are common during the influenza season.

Season	Total Cases	Peak Week (week ending)	Predominant Strain
2012-13	4,831	12/29/2012	A H3N2
2013-14	2,923	1/4/2014	2009 A H1N1
2014-15	6,443	12/27/2014	A H3N2
2015-16	1,942	03/12/2016	2009 A H1N1
2016-17	14	TBD	TBD

Multi-Season Comparison It is too soon to tell what the timing of the 2016-17 influenza season will be. Circulation is currently limited.

North Dakota Influenza Cases by Week, 2012-Current Season

Sentinel Surveillance: Outpatient Influenza-like Illness

Outpatient Surveillance The North Dakota Department of Health (NDDoH) participates with other states and jurisdictions in the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINET). Participating outpatient clinics send data on the number of patients in each of five age groups experiencing ILI, and the number of patients seen for any reason each week. ILI is defined as:

Fever of 100°F or greater
with
A cough AND/OR sore throat

Data for all providers is pooled, and a state-wide statistic for percent of visits for ILI is produced. In North Dakota, a percent ILI of **1.4%** or greater is considered season-level activity.

Current Activity This week ILI is **0.88%**, below the seasonal baseline. We are slightly above the activity seen this time last season, but still below the seasonal baseline.

Week Number	2016-17 Percent ILI	# ILI 0-4 age group	# ILI 5-24 age group	# ILI 25-49 age group	# ILI 50-64 age group	# ILI 65+ age group
201637	0.00%	0	0	0	0	0
201638	0.00%	0	0	0	0	0
201639	0.00%	0	0	0	0	0
201640	0.88%	1	2	0	2	0

Sentinel Surveillance: Laboratory Data

Laboratory Surveillance: Influenza The NDDoH receives influenza testing data from participating sentinel laboratories across North Dakota. The total number of influenza tests (all testing methodologies) and the total number of those tests that are positive are reported each week. Data for all labs is pooled, and a state-wide percent positivity statistic is produced. Percent positivity for influenza tests of 10% is greater is considered a general indicator for season-level influenza activity. **This week percent positivity for influenza is 2.60%.**

Laboratory Surveillance: Respiratory Syncytial Virus (RSV) The NDDoH receives similar testing data for RSV. RSV is a common respiratory virus best known for affecting children, however a person in any age group can become ill and people can get RSV multiple times. RSV also occurs seasonally, over a time period similar to influenza. **This week percent positivity for RSV is 2.56%.**

Other Surveillance Methods

Other Surveillance Methods: Syndromic Surveillance The NDDoH receives data from emergency departments, hospitals, and clinics across the state participating in the NDDoH's Syndromic Surveillance program. Syndromic surveillance is the receipt of near-real time reason-for-visit data for all visits at participating locations. Visits are automatically sorted into "syndromes" (gastrointestinal, neurologic, rash, ILI, etc.). Because it is based off of data such as chief complaints or diagnosis codes, the ILI syndrome has a lower specificity than the traditional outpatient ILI definition. Nonetheless, syndromic data is well correlated with our other influenza indicators.

Current Activity This week ILI in our syndromic surveillance system is **0.14%**. This is below the level of syndromic activity we saw last year at this time, but similar to other indicators, activity is currently low.

Influenza Vaccination Statistics

Vaccine Doses Administered The North Dakota Immunization Information System (NDIIS) provides information on vaccines given in North Dakota. Vaccines given to children are required to be entered into the NDIIS, while vaccines given to adults are often entered into the NDIIS, but are not required to be entered. Many providers in North Dakota have established an electronic connection with the NDIIS, allowing all vaccinations for that provider to be sent to the NDIIS automatically. A total of **56,584** doses of 2016-17 influenza vaccine have been entered into the NDIIS so far this season.

Vaccination rates by Age Group NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received an influenza vaccination so far this season. This week, the age group with the highest rates is **65+** with **14.3%**, and the age groups with the lowest vaccination rate are **13-18 year olds** and **19-49 year olds**, both with **3.9%**.

Additional Information and Announcements

National Influenza Surveillance National influenza activity and surveillance information is available from the CDC FluView website at: www.cdc.gov/flu/weekly/, and is updated every Friday.

Are you interested in tracking flu/helping others track flu? Join Flu Near You! Flu Near You is a website where users self-report symptoms on a weekly basis. Information on influenza-like illness is aggregated at the regional, state, and national level and presented on the Flu Near You website. The website also provides information on where people can get vaccinated for flu. Information at the symptom level is also available in aggregate form to state health departments. We will be adding North Dakota Flu Near You data to this report in the coming weeks. If you are interested in participating in Flu Near You, visit www.flunearyou.org.

ILINet Recruitment The NDDoH and CDC are looking for more outpatient providers to participate in the ILINet sentinel surveillance program. Data from this program is used at the state and national level for seasonal decision making. A large majority of current and past participants report participation takes less than 15 minutes each week. If your outpatient clinic is interested and willing to participate, please contact Jill Baber at jbaber@nd.gov or 701-328-3341. For more information see our brochure: <http://www.ndflu.com/Reporting/ILINetBrochure.pdf>.

Subscribe to this Report If you did not receive this report directly and would like to, please contact Jill Baber at jbaber@nd.gov or 701-328-3341 to be added to the weekly report email group.

Contact Information For information on influenza surveillance, contact the North Dakota Department of Health Division of Disease Control at 701.328.2378 or visit www.ndflu.com.
