

# North Dakota Weekly Influenza Update 2016-17 Influenza Season

Through week **201647**, the week ending **11/26/2016**

Edited by: Jill K Baber, MPH

All data are preliminary and based on reports received at the time of publication.

Published 12/1/2016

Influenza Cases by Type	
<b>A, unspecified</b>	44
<b>2009 A H1N1</b>	0
<b>A H3</b>	4
<b>B, unspecified</b>	6
<b>B Yamagata</b>	0
<b>B Victoria</b>	1
<b>Total</b>	<b>55</b>

**Weekly Narrative** We continue to see **sporadic** influenza activity across North Dakota, and most influenza indicators decreased slightly this week. Circulation of rhinoviruses and enteroviruses, which peak seasonally summer into fall and contribute to early season ILI data and influenza testing rates appear to have declined in recent weeks.

Number of Reported Laboratory-Identified Influenza Cases Reported by Week

All laboratory-identified cases of influenza (including identification via rapid test) are reportable in North Dakota. Statistics do not include data from people who did not seek medical care for their illness, or who sought medical care but were diagnosed based on symptoms, not with a laboratory test.

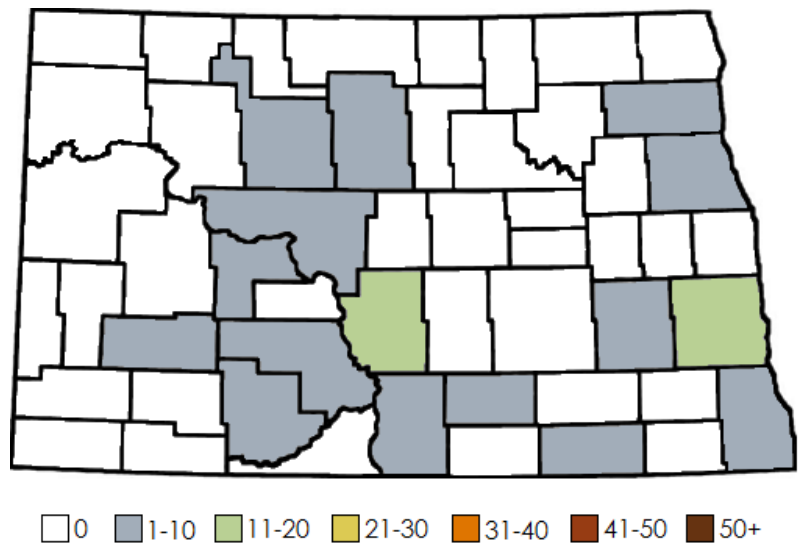

## Demographic Data

### Case Count for Lab-Confirmed Cases by Gender

### Lab-Confirmed Cases by County

### Reported Influenza Deaths and Hospitalizations\*

\*Data obtained from ad-hoc reports and state Vital Statistics. Hospitalizations and deaths are not required to be reported in North Dakota, although pediatric flu deaths are nationally reportable.

## Outbreaks and Multi-season Comparison

**Outbreaks** There have been **2** reported outbreak of influenza-like illness in long term or basic care settings so far this season, one attributed to influenza A, and another with an unknown cause.

Outbreaks in schools, assisted living facilities, workplaces, and in the general community are common during the influenza season.

Season	Total Cases	Peak Week (week ending)	Predominant Strain
<b>2012-13</b>	4,831	12/29/2012	A H3N2
<b>2013-14</b>	2,923	1/4/2014	2009 A H1N1
<b>2014-15</b>	6,443	12/27/2014	A H3N2
<b>2015-16</b>	1,942	3/12/2016	2009 A H1N1
<b>2016-17</b>	55	TBD	TBD

**Multi-Season Comparison** It is too soon to tell what the timing of the 2016-17 influenza season will be. Circulation is currently limited.

North Dakota Influenza Cases by Week, 2012-Current Season

## Sentinel Surveillance: Outpatient Influenza-like Illness

**Outpatient Surveillance** The North Dakota Department of Health (NDDoH) participates with other states and jurisdictions in the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINET). Participating outpatient clinics send data on the number of patients in each of five age groups experiencing ILI, and the number of patients seen for any reason each week. ILI is defined as:

Fever of 100°F or greater  
with  
A cough AND/OR sore throat

Data for all providers is pooled, and a state-wide statistic for percent of visits for ILI is produced. In North Dakota, a percent ILI of **1.4%** or greater is considered season-level activity.

**Current Activity** This week ILI is **0.40%**, below the seasonal baseline.

Week Number	2016-17 Percent ILI	# ILI 0-4 age group	# ILI 5-24 age group	# ILI 25-49 age group	# ILI 50-64 age group	# ILI 65+ age group
201644	1.66%	4	5	3	3	1
201645	0.59%	0	2	2	0	1
201646	0.50%	0	1	3	1	0
<b>201647</b>	<b>0.40%</b>	<b>0</b>	<b>0</b>	<b>1</b>	<b>0</b>	<b>0</b>

## Sentinel Surveillance: Laboratory Data

**Laboratory Surveillance: Influenza** The NDDoH receives influenza testing data from participating sentinel laboratories across North Dakota. The total number of influenza tests (all testing methodologies) and the total number of those tests that are positive are reported each week. Data for all labs is pooled, and a state-wide percent positivity statistic is produced. Percent positivity for influenza tests of 10% is greater is considered a general indicator for season-level influenza activity. **This week percent positivity for influenza is 1.30%.**

**Laboratory Surveillance: Respiratory Syncytial Virus (RSV)** The NDDoH receives similar testing data for RSV. RSV is a common respiratory virus best known for affecting children, however a person in any age group can become ill and people can get RSV multiple times. RSV also occurs seasonally, over a time period similar to influenza. **This week percent positivity for RSV is 7.87%.**

## Other Surveillance Methods

**Other Surveillance Methods: Syndromic Surveillance** The NDDoH receives data from emergency departments, hospitals, and clinics across the state participating in the NDDoH's Syndromic Surveillance program. Syndromic surveillance is the receipt of near-real time reason-for-visit data for all visits at participating locations. Visits are automatically sorted into "syndromes" (gastrointestinal, neurologic, rash, ILI, etc.). Because it is based off of data such as chief complaints or diagnosis codes, the ILI syndrome has a lower specificity than the traditional outpatient ILI definition. Nonetheless, syndromic data is well correlated with our other influenza indicators.

**Current Activity** This week **0.24%** of visits for in our syndromic surveillance were for ILI. Visits related to influenza vaccination have been removed from the data for this season, so we are no longer seeing a false ILI signals in our syndromic data. ILI remains low.

## Other Surveillance Methods

---

**Other Surveillance Methods: Respiratory Viral Pathogen Testing** The NDDoH's Division of Laboratory Services tests for a variety of viral respiratory diseases. Advanced molecular testing is completed using influenza PCR, as well as a respiratory viral panel (RVP). Influenza PCR is available at no cost to North Dakota providers, and the RVP is available for a fee. Many of the samples tested on the RVP come from sentinel sites participating in the Acute Respiratory Infection Epidemiology & Surveillance (ARIES) program, which is like an extended version of ILINet that investigates acute respiratory illness (ARI), and involves fairly extensive sample collection.

Rhinovirus/enterovirus viruses have been the most widely identified viruses so far this influenza season. Rhinovirus activity is common for this time of year.

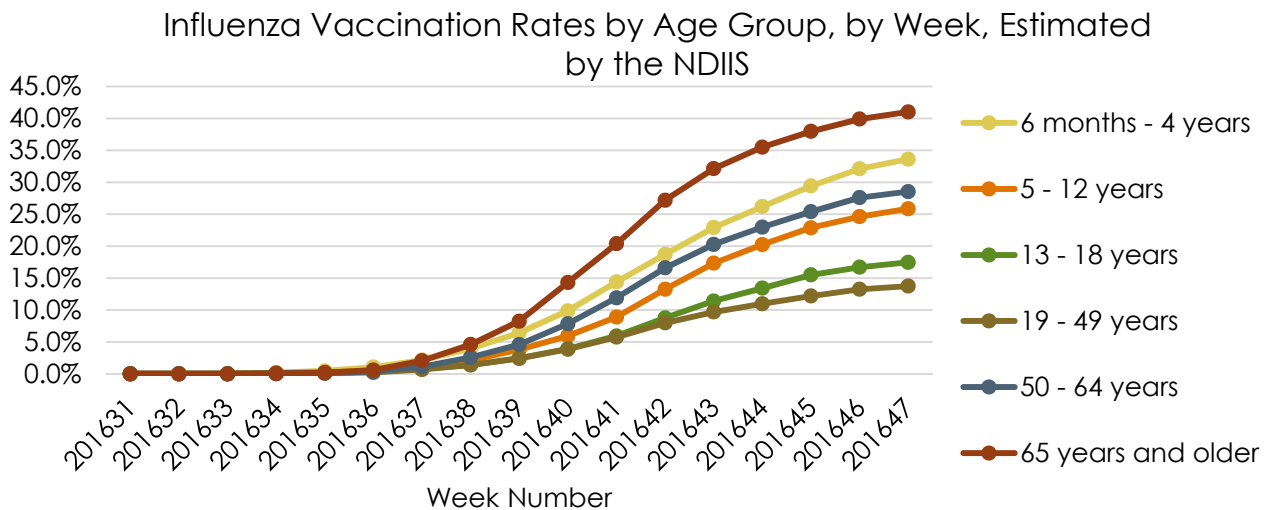

If you are provider or lab with questions regarding fee-for-service RVP testing or free influenza testing please call the Division of Laboratory Services at 701.328.6272.

## Influenza Vaccination Statistics

**Vaccine Doses Administered** The North Dakota Immunization Information System (NDIIS) provides information on vaccines given in North Dakota. Vaccines given to children are required to be entered into the NDIIS, while vaccines given to adults are often entered into the NDIIS, but are not required to be entered. Many providers in North Dakota have established an electronic connection with the NDIIS, allowing all vaccinations for that provider to be sent to the NDIIS automatically. A total of **199,862** doses of 2016-17 influenza vaccine have been entered into the NDIIS so far this season. So far this season, a total of **216,350** doses of influenza vaccine have been shipped to North Dakota providers.

**Vaccination rates by Age Group** NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received an influenza vaccination so far this season. This week, the age group with the highest rates is **65+** with **41.0%**, and the age group with the lowest vaccination rate is **19-49 year olds**, with **13.7%**.

## **Additional Information and Announcements**

---

**National Influenza Surveillance** National influenza activity and surveillance information is available from the CDC FluView website at: [www.cdc.gov/flu/weekly/](http://www.cdc.gov/flu/weekly/), and is updated every Friday.

**Need a flu vaccine?** Visit [www.vaccinefinder.org](http://www.vaccinefinder.org) to find locations providing influenza vaccine near you.

**Are you interested in tracking flu/helping others track flu?** Join **Flu Near You!** Flu Near You is a website where users self-report symptoms on a weekly basis. Information on influenza-like illness is aggregated at the regional, state, and national level and presented on the Flu Near You website. The website also provides information on where people can get vaccinated for flu. Information at the symptom level is also available in aggregate form to state health departments. We will be adding North Dakota Flu Near You data to this report in the coming weeks. If you are interested in participating in Flu Near You, visit [www.flunearyou.org](http://www.flunearyou.org).

**ILINet Recruitment** The NDDoH and CDC are looking for more outpatient providers to participate in the ILINet sentinel surveillance program. Data from this program is used at the state and national level for seasonal decision making. A large majority of current and past participants report participation takes less than 15 minutes each week. If your outpatient clinic is interested and willing to participate, please contact Jill Baber at [jbaber@nd.gov](mailto:jbaber@nd.gov) or 701.328.3341. For more information see our brochure: <http://www.ndflu.com/Reporting/ILINetBrochure.pdf>.

**Subscribe to this Report** If you did not receive this report directly and would like to, please contact Jill Baber at [jbaber@nd.gov](mailto:jbaber@nd.gov) or 701.328.3341 to be added to the weekly report email group.

**Contact Information** For information on influenza surveillance, contact the North Dakota Department of Health Division of Disease Control at 701.328.2378 or visit [www.ndflu.com](http://www.ndflu.com).
