2019-20 Weekly Influenza Update

Preliminary data through week 201944, the week ending 11/02/2019

Edited by: Levi Schlosser, Influenza Surveillance Coordinator

Overview

As of this week:	This season (2019-20)	Last season (2018-19)
Cases reported for the week	20	84
Cumulative cases for season	90	308
Activity level	Sporadic	Local

The case count for this past week has slightly increased as compared to the previous week, but is still significantly lower than the count this time last season. A majority of the cases that have been identified have been located on the eastern of northeastern parts of the state, and more counties are beginning to see cases of the flu. Differing from last season is also the predominant strain so far; more cases of Influenza B have been reported than of Influenza A, which disproportionately affects children and younger adults. The best way to prevent the flu is to get vaccinated against it, so be sure to get your influenza vaccination as soon as possible. The flu vaccine takes approximately two weeks to provider protection. Several strains circulate each season, so it is recommended even if you have already had the flu.

Number of Reported Laboratory-Identified Influenza Cases by Week Number
| Number of cases:	A H3N2	2009 A H1N1	Influenza A	Influenza B	B Yamagata	B Victoria
This week	0	0	1	19	0	0
This season	8	1	20	59	0	3

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza "cases" include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or who were diagnosed without a lab test, which is common. The true number of people with influenza in North Dakota is underrepresented, but case data allows us to see where and in what populations influenza is circulating. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on www.ndflu.com.

Outbreaks

During the influenza season, influenza outbreaks are common anywhere people gather, including schools, child care centers, and health care facilities. Outbreaks of influenza or influenza-like illness may be reported to the NDDoH. The following outbreaks have been reported this season:

Setting	Number of outbreaks	Identified pathogens
Long Term Care, Basic Care, Assisted Living	0	
Schools	0	
Child Care Centers	0	

Surveillance Programs

In addition to case reporting, the NDDoH uses a variety information sources to fully describe of what is happening during the influenza season.

Hospitalizations

This season, the NDDoH has introduced a new influenza hospitalization surveillance program. Select North Dakota hospitals report the number influenza-related hospitalizations weekly to the NDDoH. Because this surveillance methodology is new, hospitalization numbers this year may not be comparable to previous years.

Number of Influenza Hospitalizations by Week Number

Total number of Hospitalizations:

This week	0
This season	3
Deaths

Data on pneumonia and influenza deaths is obtained from Vital Records and based on the cause of death listed on the death certificate.

Number of Pneumonia and Influenza Deaths by Week Number

Total number of deaths for the season:

Pneumonia	89
Influenza	0
Outpatient Influenza-like Illness

The NDDoH participates in the national U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in North Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visits due to influenza-like illness (ILI). Patients presenting with a fever of 100ºF or greater and a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see FluView Interactive.

Percent of Outpatient Visits Due to Influenza-like Illness by Week, Current and Previous Season
Week Number	Percent ILI	# ILI 0-4 age group	# ILI 5-24 age group	# ILI 25-49 age group	# ILI 50-64 age group	# ILI 65+ age group	Total # visits
201941	0.77%	4	8	8	3	2	3352
201942	1.29%	13	6	20	2	5	3641
201943	1.15%	7	16	11	1	5	3464
201944	1.44%	10	13	11	2	2	2647

Sentinel Laboratory Data

The NDDoH receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. For influenza, percent positivity of 10% or greater indicates "season level" influenza activity.

Percent Positivity for Influenza:

3.95%

Percent Positivity of RSV Testing and the Total Number of Tests Conducted

|	
Percent Positivity for RSV:	
1.12%	
School Absenteeism

During the influenza season, increases in school absenteeism data can be used as an early indicator for influenza circulation. The NDDoH received absenteeism data from a majority of schools in the state. Data here include absences for all reasons.

North Dakota Influenza Cases by Week, 2015-Current Season

Legend: 2015-16 Season, 2016-17 Season, 2017-18 Season, 2018-19 Season, 2019-20 Season

Season	Total Cases	Peak Week (week ending)	Predominant Strain
2015-16	1,942	3/12/2016	2009 A H1N1
2016-17	7,507	2/18/2017	A H3N2
2017-18	8,498	1/27/2018	A H3N3
2018-19	589	3/27/2019	2009 A H1N1
2019-20	90 (current)	TBD	TBD

2019-20 Vaccination Stats

Vaccine Doses Administered

The North Dakota Immunization Information System (NDIIS) provides information on vaccines given in North Dakota. Vaccines given to children are required to be entered into the NDIIS, while vaccines given to adults are often entered into the NDIIS but are not required to be entered. Many providers in North Dakota have established an electronic connection with the NDIIS, allowing all vaccinations for that provider to be sent to the NDIIS automatically. A total of **177,630** doses of 2019-20 influenza vaccine have been entered into the NDIIS so far this season.

Influenza Doses Administered by Week
Vaccination Rates by Age

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received an influenza vaccination so far this season. This week, the age group with the highest rates is **65+** with **38.5%**, and the age group with the lowest vaccination rate is **19-49 year-olds**, with **13.6%**.

Influenza Vaccination Rates by Age Group by Week (according to the NDIIS)

- 6 months - 4 years
- 5 - 12 years
- 13 - 18 years
- 19 - 49 years
- 50 - 64 years
- 65 years and older
