

Laboratory-confirmed influenza cases have decreased again but have remained stable for the previous week. Influenza seasons are often unpredictable, and it is possible that influenza activity will continue throughout the remainder of the 2021-22 influenza season. If you have not already done so, it is not too late to get your influenza vaccination; for more information regarding flu vaccination, please visit health.nd.gov/immunize.

	Last Week	Season Total
New Influenza Cases:	101	9,524
Outpatient Visits for Influenza-like Illness:	2.20%	3.46%
Laboratory Specimens Positive for Influenza:	3.47%	9.09%
Percentage of Students Absent from School:	0.01%	10.19%
New Hospitalizations due to Influenza:	1	194
New Deaths due to Influenza:	0	36

Subtype	Cases in Previous Week	Total for Season
Influenza A	93	9,064
Influenza A 2009 H1N1	0	1
Influenza A H3N2	8	298
Influenza B	0	161
Total	101	9,524

Influenza Cases by Week Number

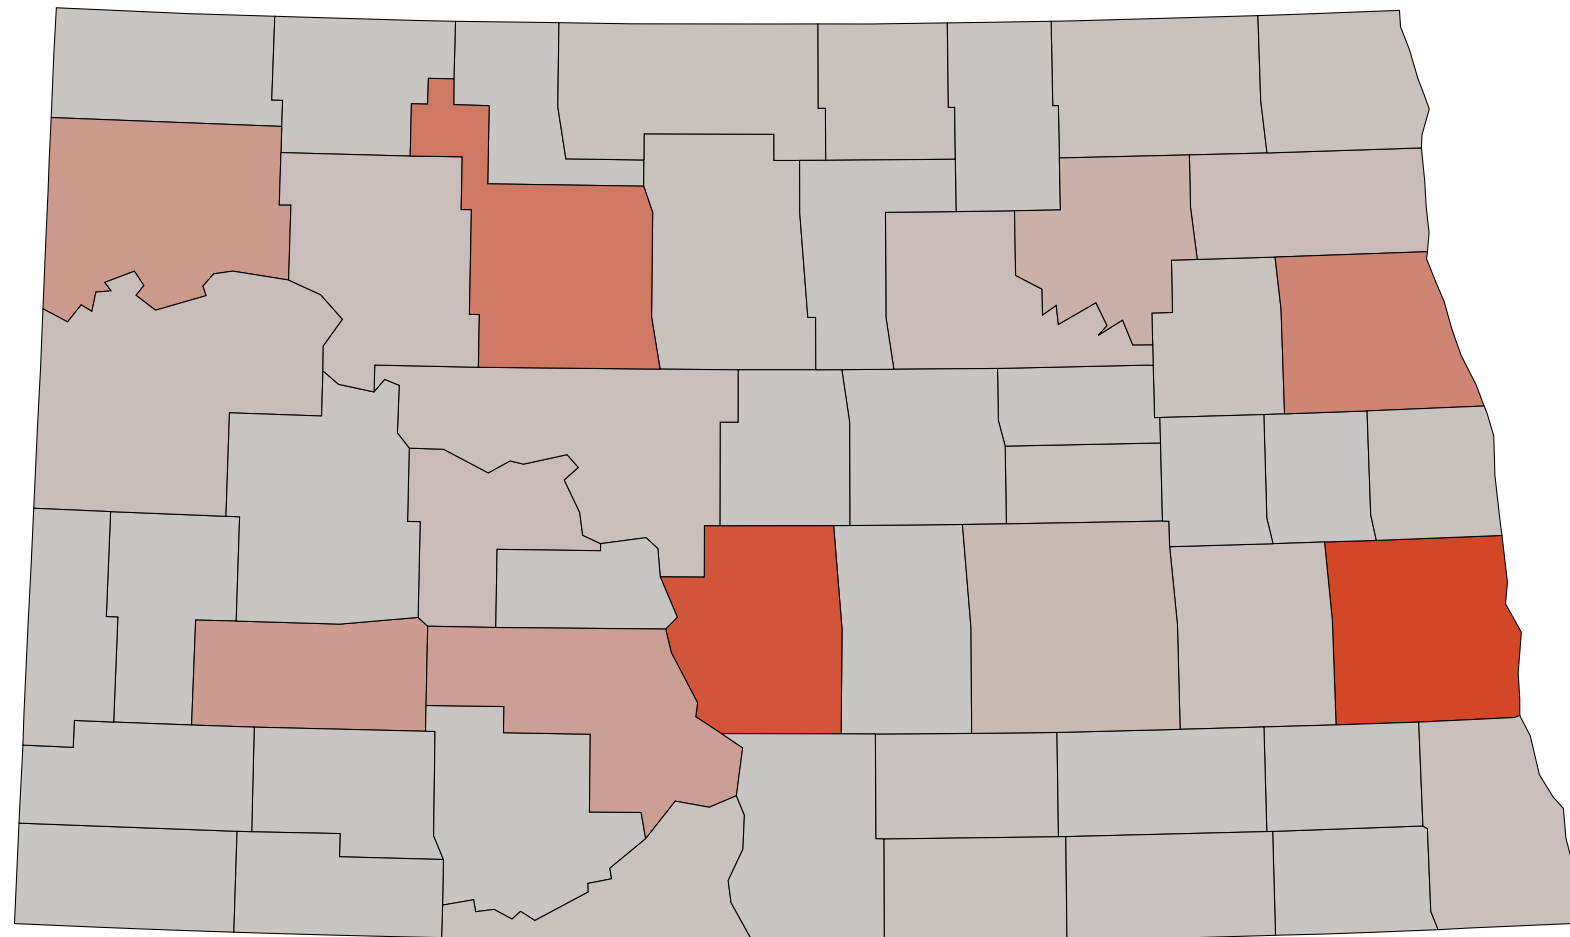

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza "cases" include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or were diagnosed without a lab test, which is common. The true number of people in North Dakota is underrepresented, but case data allows us where influenza is circulating and in what populations. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on ndflu.com

Influenza Cases by Gender

Influenza Cases by Age Group

Influenza Hospitalization information is collected via daily aggregated reports to the NDDoH. Because this surveillance methodology is new this year, hospitalization numbers this year may not be comparable to previous years.

Influenza Death information is obtained from Vital Records, and is based on the listed cause of death on the individuals death certificate.

Pneumonia/Flu Deaths

Outpatient Influenza-like Illness (ILI) The NDDoH participates in the national U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in north Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visits due to influenza-like illness (ILI). Patients presenting with a fever of 100 degrees or greater AND a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see [FluView Interactive](#)

Percent ILI by Week

Week Ending Date:	Total # of Patients Seen for Any Reason	Percent ILI
Saturday, January 22, 2022	3,711	5.12%
Saturday, January 29, 2022	2,776	6.56%
Saturday, February 05, 2022	3,168	3.06%
Saturday, February 12, 2022	3,419	3.19%
Saturday, February 19, 2022	3,128	2.27%
Saturday, February 26, 2022	3,006	2.20%
Total	19,208	3.72%

Sentinel Laboratory Data The NDDoH receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. For influenza, percent positivity of 10% or greater indicates 'season level' influenza activity.

Flu Positivity by Week

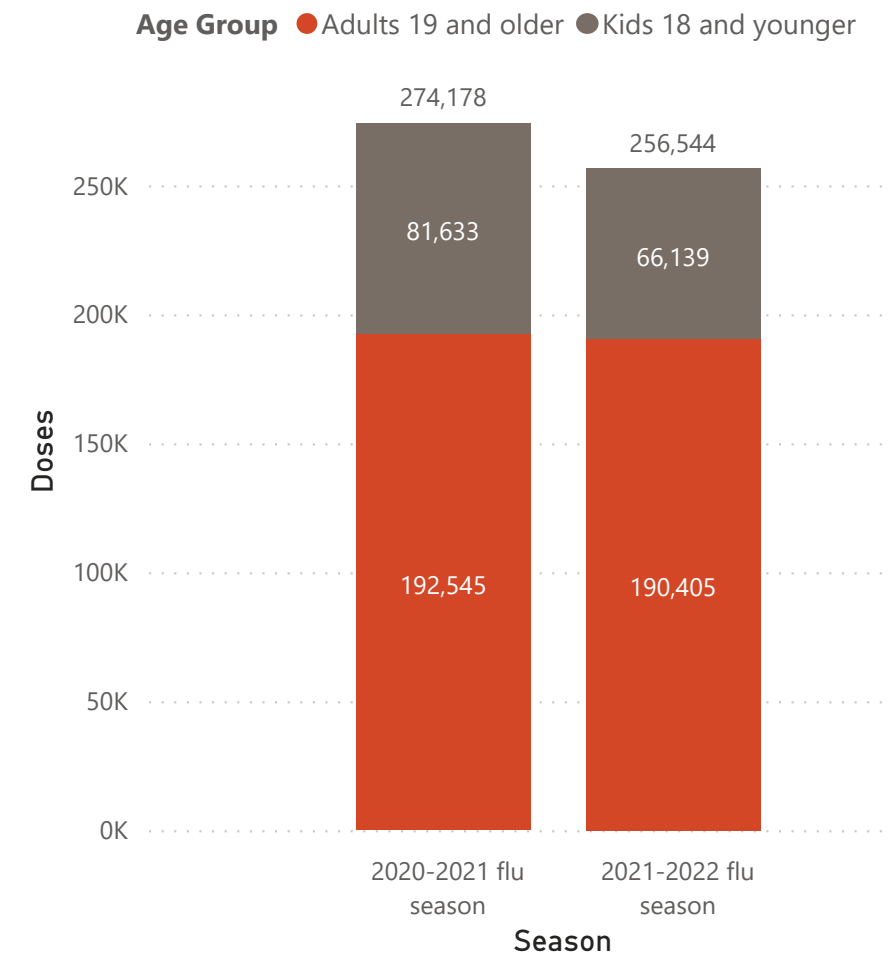

Week ending date:	Total # of Specimens Tested	Flu Positivity	RSV Positivity
Saturday, January 22, 2022	3,525	5.90%	1.35%
Saturday, January 29, 2022	3,091	3.33%	2.53%
Saturday, February 05, 2022	2,005	5.39%	2.12%
Saturday, February 12, 2022	1,580	3.35%	0.66%
Saturday, February 19, 2022	1,304	3.30%	1.91%
Saturday, February 26, 2022	923	3.47%	1.19%
Total	12,428	4.40%	1.68%

Influenza vaccine doses administered data from the North Dakota Immunization Information System (NDIIS) includes all administered doses of flu vaccine documented in the NDIIS to records with a North Dakota address. Adult immunizations do not have to be reported to the NDIIS so there may be more influenza vaccine doses being administered that are not reported to the NDIIS. Age groups are determined base on age at time of vaccination.

Doses Administered by Age Group

Statewide Doses Administered

Total Influenza Vaccine Doses Administered by County

Week Number

All

Age Group

- ADULT
- CHILD

County-level doses administered data includes all administered doses of flu vaccine documented in the NDHIS as given to an individual with an address in the North Dakota county, regardless of where the provider who administered the dose was located.

Statewide Flu Coverage for 2021-22 Season

Age Group ● Adults 19 and older ● All ND 6 months and older ● Kids 18 and younger

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received at least one dose of influenza vaccine so far this flu season. NDIIS records included in **statewide coverage rates** must have a North Dakota address.

Adult immunizations do not have to be reported to the NDIIS so adult coverage rates may be higher.

Statewide Flu Coverage for Children <= 18

Statewide Flu Coverage for Adults >= 19

Influenza Vaccine County Coverage Rates
