

Preventative Services for Men

DEFINITION	Quality family planning services recommendations for men seeking barrier methods require no special evaluation. However, men requesting advice on pregnancy prevention and/ or STD testing, should be provided quality family planning services which include preconception health, STD services, basic infertility services, and/or preventive health services. These screening components include reproductive life plan, medical history, sexual health assessment, alcohol & other drug use, tobacco use, immunizations, and depression. Physical examination and laboratory testing can be done if clinically indicated.
